EDUCATION

Huazhong University of Science and Technology

B.Eng. in Cyberspace Security

Wuhan, China

2024–2028 (Expected)

- **GPA:** 4.36/5.00; **Average Score:** 88.8/100; **Rank:** 19/81
- **Selected Coursework:** Linear Algebra, Probability Theory and Mathematical Statistics, Discrete Mathematics, Numerical Analysis, Computer Networks.
- **Honors & Awards:**
 - Bronze Award, University-level Round, 14th “Qishi Cup” College Student Entrepreneurship Plan Competition — Apr 2026
 - Academic Excellence Scholarship — Sep 2025; Apr 2025
 - Scholarship for Cultural and Sports Activities — Sep 2025; Apr 2025

RESEARCH & PROJECT EXPERIENCE

M³-RS: Multimodal Agents for Remote Sensing

Team Lead and Primary Developer

Aug 2026

[Code](#) · [Technical Report \(Chinese\)](#)

- Designed and implemented a multimodal agent system to address the distinct visual evidence requirements of remote-sensing tasks, using a visual planner to select tasks and relevant image regions and coordinate specialized agents with on-demand detection and segmentation tools.
- Led task-specific LoRA fine-tuning of a shared Qwen3.5-9B backbone, using training inputs constructed through the inference workflows to match runtime prompts, image views, and optional visual expert evidence.
- Evaluated the system across four remote-sensing benchmarks, achieving **71.92% Acc@0.5** on VRSBench grounding and **58.99% exact match** on XLRS-Bench VQA without training on XLRS-Bench VQA data; metrics were computed over valid predictions.

ADDITIONAL EXPERIENCE

Deep Learning Summer Workshop

NUS School of Computing

May–Jul 2026

[Pokonyan Code](#)

- Developed a cat-recognition system for a course challenge requiring live recognition on a mobile vehicle, collecting and manually annotating online images, training a YOLO model, and quantizing it for deployment on a Raspberry Pi 5.
- Correctly recognized all **8 test images during the live demonstration**, the only team in the course to achieve a perfect score.
- Co-developed **Pokonyan** to help people with hearing loss access environmental sounds and spoken information, integrating YAMNet for sound classification and Whisper for real-time speech transcription; selected for the final showcase.

TECHNICAL SKILLS

Programming Languages: Python, C

Methods: LoRA fine-tuning, model quantization, multimodal model evaluation

Languages: English (CET-4: 570); Mandarin Chinese (Native)
