EDUCATION

Huazhong University of Science and Technology

Third-year undergraduate, Cyberspace Security

2024–2028 (Expected)

Wuhan, China

- **GPA:** 4.36/5.00; **Average Score:** 88.8/100; **Rank:** 19/81
- **Selected Coursework:** Linear Algebra (A), Probability Theory and Mathematical Statistics (A+), Discrete Mathematics I/II (A/A+), Numerical Analysis (B+), Computer Networks (A), Digital Circuit and Logic Design (A+).
- **Honors & Awards:**
 - Bronze Award, University-level Round, 14th “Qishi Cup” College Student Entrepreneurship Plan Competition — Apr. 2026
 - Academic Excellence Scholarship — Sep. 2025; Apr. 2025
 - Scholarship for Cultural and Sports Activities — Sep. 2025; Apr. 2025

RESEARCH & PROJECT EXPERIENCE

M³-RS: MoE-Mind Multimodal Remote Sensing

Aug. 2026

Team Lead and Primary Developer

Advisor: [Jiaxi Zhou](#)

- Designed and implemented a multimodal agent system to address the distinct visual evidence requirements of remote-sensing tasks, using a visual planner to select tasks and relevant image regions and coordinate specialized agents with on-demand detection and segmentation tools.
- Led task-specific LoRA fine-tuning of a shared Qwen3.5-9B backbone, using training inputs constructed through the inference workflows to match runtime prompts, image views, and optional visual expert evidence.
- Evaluated the system across four remote-sensing benchmarks, achieving **71.92% Acc@0.5** on VRSBench grounding and **58.99% exact match** on XLRB-Bench VQA without training on XLRB-Bench VQA data; metrics were computed over valid predictions.

Deliverables: A [technical report \(Chinese\)](#) documenting the system design, training, and evaluation, and a [code repository](#) containing the implementation.

Deep Learning Summer Workshop

Jul. 2026

NUS School of Computing

Advisors: [Jithin Vachery](#) and [Boyd Anderson](#)

1. Pokonyan — Assistive Robot for People with Hearing Loss

- Co-designed the system architecture of an assistive robot for people with hearing loss, connecting environmental sound detection and real-time transcription with robot navigation, physical alerts, and smartphone displays.
- Collaboratively investigated audio filtering and transcription latency: tested band-pass filtering on mixed speech and environmental recordings, and adopted an open-source transcription pipeline pairing incremental output from a lightweight model with refinement by a larger model.

Deliverables: A [code repository](#); featured in the course wrap-up slides at the final showcase.

2. Embedded Cat Recognition on a Mobile Vehicle

- Contributed to dataset collection, annotation, and YOLOv5 training for a Raspberry Pi 5–based mobile cat-recognition system, collaborating with teammates on model deployment.

Deliverables: A deployed cat-recognition system that correctly recognized all **8 test images** in the live demonstration—the only team in the course to achieve a perfect score.

SKILLS

Programming: Python, C/C++

Skills: PyTorch, Hugging Face Transformers, PEFT, MLLM post-training

AI Development Tools: Codex, Claude Code, Pi, DeepSeek Harness

Languages: English (CET-4: 570); Mandarin Chinese (Native)
